

Case Study 4

Customer Summary

Our clients Technologies have been established since 2003 with headquarters residing in Leeds. They are one of the largest Telecoms company within the United Kingdom, with millions of Broadband, Telephone, TV and Mobile Subscribers throughout the country.

Challenge

Our client was looking to deploy a highly available vSphere Metro Cluster to provide not only High Availability in case of a datacenter outage but also to run both datacentres in Active/Active mode. Specific requirements along with multiple solution vendors within the environment increased the complexity of the problem.

For this to be possible our client engaged with ViCoS through VMware Professional Services to both design and implement the entire VMware vSphere Infrastructure and to help orchestrate the failover process move across different classifications of payloads, such as:

- Management tier
- Gold tier
- Silver tier
- Bronze tier

Design and implementation of the engagement required a proven establishment with a flawless track record of delivery.

Results

ViCoS, with a flawless track record of delivery and professionalism successfully delivered the end product to the customer and are able to bring the in-depth knowledge and overall expertise to the table in order to pave the way forward for their design.

Our client now enjoys the benefits of Active/Active Datacenters with the ability to recover from a datacenter failure with a few minutes. The solution provides:

- Disaster Recovery
- Business Continuity
- Better backup abilities
- Network Compliance

Due to ViCoS's extensive VMware expertise and the ability to look above and beyond the implementation and assist the customer in other areas of the design to help achieve make the engagement successful.
